## PROFILE

Product Manager with 3+ years across ERP, logistics, govtech, and maritime domains. Currently laying the foundational platform infrastructure at eDOT (Nabati Group's tech arm) — defining the architecture powering SCM, POS integration, and SSO across Richeese Factory's 200+ outlets. Comfortable leading cross-functional squads, moving fast with AI-assisted workflows, and turning messy stakeholder needs into clear product decisions.

## EXPERIENCE

### Product Manager | eDOT — PT. Elektronik Distribusi Otomatisasi Terkemuka

Oct 2025 – Present

*eDOT is the technology arm of Nabati Group, one of Indonesia's largest F&B conglomerates, building digital infrastructure for its brands including Richeese Factory.*

- Orchestrated product delivery across 2 squads (~10 engineers: FE, BE, QA, Full-Stack Senior) — managing priorities, sprint ceremonies, and cross-squad dependencies.
- Established the foundational product architecture for an integrated SCM & ERP platform designed to serve 200+ Richeese Factory outlets — defining core data models, system boundaries, and integration contracts that all subsequent modules are built upon.
- Led a full refactor of eDOT's authentication and onboarding experience across the platform ecosystem, setting a unified identity layer as the foundation for multi-system SSO enablement.
- Eliminated OTP-based SMS from standard merchant auth flows — reducing authentication SMS costs by 100% while retaining OTP only for critical operations (password reset, phone verification, bank account changes). Migrated remaining flows from legacy SMS providers to Meta.
- Defined the integration architecture for a newly acquired POS system into the broader ERP ecosystem, resolving foundational challenges around merchant experience and buyer loyalty.
- Leveraged AI agents and LLM-powered workflows across architecture design, documentation, and stakeholder alignment — accelerating foundational delivery without sacrificing depth.

### Product Manager | Quantum — PT. Quantum Teknologi Nusantara

Oct 2024 – Sep 2025

*Quantum is an AI-solution company building modular, widget-based enterprise applications for government and private sector clients.*

- Led monitoring & evaluation concept design for POLRI SuperApp — a national police super-application used across multiple Satuan Kerja (KORLANTAS, BAINTELKAM, etc.).
- Managed cross-functional delivery with government stakeholders, third-party vendors (BPJS, KEMENDIKBUD), and internal engineering and design teams.
- Directly reported system enhancements and product progress to the CEO and relevant government stakeholders.

#### Key Achievement:

- ✓ Improved POLRI SuperApp Play Store rating from 2.7 → 3.2 by systematically identifying and resolving critical bugs across the app experience.
- ✓ Delivered a centralized monitoring and evaluation system that reduced inter-departmental coordination time through real-time status reporting.
- ✓ Coached team on Agile development practices, improving internal delivery process adopted as Quantum Ops standard.

### Junior Product Manager | TITIP.io — PT. Total Integrasi Transportasi Indonesia

Dec 2023 – May 2024

*TITIP.io is an Indonesian maritime technology startup (part of Sinarmas LDA Maritime) focused on voyage, vessel, and cargo management for mining and commercial commodities.*

- Owned end-to-end product delivery for Ship to Shore Mobile App and Voyage Management — authoring PRDs, JIRA tickets, and managing bug resolution.
- Led and participated in all sprint ceremonies: daily standups, sprint planning, grooming, and retrospectives.

- Collaborated with business, commercial, finance, operations, engineering, and design teams, as well as external clients.

**Key Achievement:**

- ✓ Successfully delivered requirements for 2 new products within agreed timelines.
- ✓ Improved product quality by continuously resolving critical bugs from previous development cycles.

**Associate Product Manager** | *Valid — PT. Virtue Digital Indonesia (Lacak.io)*

Dec 2022 – Nov 2023

*Valid is a logistics-tech company operating Lacak.io, building digital solutions for national logistics infrastructure.*

- Led ideation, research, design, and development of Transporta and the National Logistics Environment (NLE) — two strategic logistics products developed under direct CEO supervision.
- Worked directly with C-level executives to translate business objectives into product strategy and release plans.
- Led 2 external project engagements: Smart Prison Project (AI-powered inmate management system for Indonesian corrections) and Depo Management System (DMS) — interfacing directly with CEO, COO, and government clients.
- Managed stakeholder reporting with weekly update presentations, sprint ceremonies, and cross-functional coordination.

**EDUCATION**

---

**Universitas Indonesia**

Aug 2015 – Aug 2020

Bachelor of Social Science — Social Welfare · GPA: 3.31/4.00
